

Strategic AI Implementation Roadmap: Prioritized Use Cases

1. Executive Implementation Framework

This roadmap defines the architectural transition of the firm into an "Agentic-driven Enterprise." Our objective is not marginal improvement, but a radical shift: transitioning 70% of all job functions into AI-assisted workflows by 2026. This mandate requires a rigorous prioritization of resources across three distinct implementation tiers.

Tier	Strategy	Implementation Hierarchy	Architectural Focus
Tier 1	Adopt (Immediate)	Integration: Rapid deployment of off-the-shelf GenAI tools to establish immediate baseline productivity.	Claude Cowork, NotebookLM
Tier 2	Push (Short-term)	Leverage: Demanding and pressuring SaaS/Agent vendors to deliver roadmaps that align with our 2026 FOC.	Unanet (ERP/FI), DRAI (BD)
Tier 3	Build (Long-term)	Proprietary Development: Designing custom agentic solutions and "Moonshot" projects for competitive advantage.	Project Sentinel, Agentic Chief-of-Staff

2. Business Development, Capture, and Proposal Operations

The strategic imperative is to move from manual, labor-intensive drafting to an AI-led pipeline capable of driving \$50M in annual recurring revenue.

- Tier 1: Adopt (Immediate)
 - Proposal Writing & Technical Response: Systematic use of GenAI for drafting Technical Responses, PWS, and SOW creation.
 - Value Proposition Engineering: Automated generation of ROI calculations and tailored value proposals.
 - Client Alignment: AI-enhanced follow-up and follow-through protocols to ensure continuous client engagement.
- Tier 2: Push (Short-term)
 - Pipeline Intelligence: Leveraging external platforms like DRAI for continual pipeline refreshes.
 - Financial Modeling: Utilizing vendor-supplied AI for initial Price Realism and Price to Win (PTW) frameworks.
- Tier 3: Build (2026 Vision)

- **80% AI-Generated Proposals:** Proprietary systems designed to handle the bulk of proposal generation with minimal human intervention.
- **Agent-Based Pipeline Deployment:** A custom-built BD agent ecosystem designed to manage the entire capture lifecycle.
- **AI-Driven Pricing Strategy:** Moving beyond basic modeling to proprietary, AI-driven pricing engines that maximize win probability and margin.
- **Message Differentiation:** Agentic analysis of competing messages to identify and exploit organizational "Unicorn" differentiators.

3. Back-Office Excellence: Finance and Human Resources

Efficiency in the back office is predicated on the "Data Cube" infrastructure—the base data plumbing required for auditable, autonomous operations.

Finance

- **Tier 2: Push (Short-term)**
 - **Vendor Accountability:** We will push Unanet and other ERP/FI vendors to integrate practical AI for Cash Tracking, AP/AR, and Budgeting. We demand high-functioning AI modules as a condition of continued partnership.
- **Tier 3: Build (Mid-to-Long term)**
 - **Project Sentinel Integration:** Deploying Project Sentinel to achieve "automatically" auditable business results.
 - **Automated Financial Reporting:** Custom agents will generate complete financial reporting packages, removing manual reconciliation from the critical path.

Human Resources

- **Tier 1: Adopt (Immediate)**
 - **Employee Support:** Deployment of AI-answer-agents to handle benefits inquiries and policy questions.
- **Tier 3: Build (Mid-to-Long term)**
 - **Agentic Recruiter:** Development of a proprietary recruiter agent to scrub, prioritize, and vet top candidates.
 - **Technical Vetting Infrastructure:** AI-driven technical interviews designed to provide a definitive yes/no vetting of candidate capabilities.
 - **Workforce Planning (WFP) & Skill Mapping:** Systems that track global staff skills and training gaps. Critically, this system will identify and protect "Key skills that AI cannot do," ensuring our human capital strategy complements our technical architecture.
- **Mandatory Constraint:** All HR AI implementations must adhere to strict PII protection protocols and confidentiality standards as a foundational architectural requirement.

4. Quality Control (QC) and Project Governance

"Zero Defects Every Time" is not a slogan; it is an architectural requirement facilitated by Agentic AI.

- **Agentic Project Management (PMO):** We will build or buy an "Agentic Project Helper" to automate routine PMO oversight.

- **AI-Controlled Project Gates:** Implementing non-negotiable project gates governed by AI to ensure compliance, quality, and risk mitigation before any project advances.
- **Escalation and Issue Resolution:** Utilizing agents for rapid escalation resolution and the management of solution enhancements/Change Requests (CRs).
- **Auditable Governance:** Ensuring that every project decision and outcome is recorded and auditable through the Project Sentinel framework.

5. Marketing and Proprietary Product Development

The marketing function will transition from a traditional cost center to a "World-class Marketing" engine, where 90% of output is agent-driven.

- **Tier 1: Content Creation:** Immediate adoption of GenAI for market research, whitepaper creation, and content generation.
- **Tier 3: Proprietary Marketing & Products:**
 - **Agentic Marketing Engine:** Building proprietary agents to manage pipeline generation and competitive positioning.
 - **Capability Unicorn:** The strategic integration of LLMs and Agentic AI directly into our proprietary product line, making AI a core feature of our market offering.

6. Enterprise-Wide Productivity & Executive Support

We will automate routine processes to reclaim executive bandwidth, targeting a 60% reduction in routine administrative tasks.

- **Tier 1: Operational Wins (Immediate)**
 - **Administrative Automation:** Utilizing tools like NotebookLM for meeting facilitation, calendar coordination, and resource modeling.
 - **Communication Support:** Leveraging GenAI for the creation of All-Hands slides, Board Decks, and internal metrics.
- **Tier 3: The Moonshot (Mid-to-Long term)**
 - **The "Kevin/Caroline" Chief-of-Staff Model:** This is a proprietary build of a highly personalized Agentic Chief-of-Staff. Unlike simple automation, this agent is designed to mirror executive decision-making logic, manage internal ROI calculators, and independently handle 60% of routine executive processes.

7. Strategic Constraints and Risk Mitigation

Transitioning from the "False Today" to the "True Future" requires solving fundamental data and human barriers.

Risk/Barrier (False Today)	Resolution Strategy (2026 Horizon)
PII, Confidentiality & Legal	Implementation of "The Base Data Plumbing" and specialized RFP compliance agents.

Hallucinations & Risk in Interpretation

Project Sentinel 5.0: Our proprietary solution for ensuring zero-defect interpretation and auditable results.

Data Silos

The Data Cube: Establishing the underlying infrastructure that serves as the single source of truth for all agents.

Human Resistance

Identifying and managing "subpar employees" who resist AI adoption; refocusing hiring on skills AI cannot replicate.

8. Implementation Timeline: The 2026 Horizon

The path to Full Operational Capability (FOC) is a structured technical evolution:

1. **Foundation (The Data Cube):** Establishing "The Base Data Plumbing" to centralize organizational intelligence.
2. **IOC (Initial Operational Capability):**
 - Widespread adoption of Tier 1 tools (Claude, NotebookLM).
 - Initial build of Project Sentinel for data automation and auditing.
 - Definition of criteria for automated financial reporting.
3. **The 25% Milestone:** Refining criteria and requirements based on initial wins, targeting a 25% enterprise-wide operational improvement through Tier 1 and Tier 2 successes.
4. **FOC (Full Operational Capability - 2026):**
 - Deployment of **Sentinel 5.0** for zero-defect operations.
 - Realization of the **Agent-based BD pipeline** (\$50M recurring revenue target).
 - Integration of the **Capability Unicorn** into proprietary products.
 - Transition to 90% Agent-driven Marketing and 60% automated routine processes.
