01 | EXECUTIVE BOARD PROFILE

A governance approach grounded in disciplined oversight, responsible innovation, and enterprise-scale operating realities.

Governance Philosophy

My governance philosophy is anchored in a "governance-before-growth" mindset. In high-stakes, highly regulated industries, effective board service requires balancing strategic ambition with rigorous oversight.

I believe the Board’s primary responsibility is to serve as an objective steward of long-term enterprise value, ensuring that management’s drive for innovation is balanced by disciplined risk management, ethical accountability, and a clear understanding of enterprise-scale operational realities.

I approach governance as a constructive partnership: challenging assumptions, fostering informed decision-making, and maintaining a steadfast commitment to fiduciary duty and regulatory integrity.

Committee Readiness

TECHNOLOGY & CYBERSECURITY

AI strategy • Cloud modernization • Enterprise risk • Data governance

Evaluate technology roadmaps, oversee data governance frameworks, and help ensure cybersecurity considerations are integrated into enterprise strategy.

RISK & AUDIT

Regulatory compliance • Operational resilience • Complex risk

Apply experience across defense and public-sector environments to inform oversight of regulatory and operational risk.

STRATEGY & INNOVATION

Capital allocation • Technology investment • AI scale

Provide an independent lens on long-term technology investments and the transition from AI experimentation to production-scale adoption.

Strategic Value

As an Independent Director, I offer a combination of boardroom-ready governance perspective and hands-on executive leadership. My experience includes building and managing AI operating models, governance frameworks, and data strategies that connect complex technology transformation with measurable business outcomes.

02 | EXECUTIVE LEADERSHIP PROFILE

Technology and business leadership shaped by mission-critical environments, enterprise transformation, and responsible AI adoption.

Executive Journey

My leadership journey has been shaped by complex, mission-critical environments. My early service in the U.S. Army established a foundation in operational continuity, disciplined execution, and the practical realities of large-scale systems.

That foundation carried into roles with Deloitte, Google, AWS, SAP, and other enterprise technology environments, where I advised Fortune 100 and public-sector organizations on transformation, cloud, analytics, ERP, and digital strategy. Across these settings, I have worked at the point where technical decisions meet business priorities, organizational change, and executive accountability.

Today, as Chief AI Officer at C5MI, I lead AI strategy and implementation, with a focus on moving intelligent technologies from experimentation toward practical enterprise use.

Leadership Philosophy

I believe effective executive leadership begins with strategic clarity and is sustained through accountable execution. My approach emphasizes transparency, evidence-based decision-making, and cross-functional teams aligned around a shared purpose.

I place particular value on connecting people who view an issue from different perspectives—engineering teams, government organizations, business leaders, C-suite executives, and strategic partners. That alignment helps ensure technology investments are understood in the context of business objectives rather than treated as isolated technical initiatives.

I also believe leaders must remain accountable for the practical and ethical consequences of their decisions. Healthy debate, inclusion, and disciplined follow-through create the conditions for resilient organizations and durable results.

Enterprise Leadership Perspective

FROM EXPERIMENTATION TO SCALE	Move beyond AI pilots toward enterprise adoption by addressing operating models, culture, change management, governance, and practical business value.	EXECUTIVE PERSPECTIVE
RESPONSIBLE AI IN REGULATED ENVIRONMENTS	Apply technology with appropriate attention to human impact, security, accountability, and responsible use, particularly in healthcare, defense, and other regulated settings.	EXECUTIVE PERSPECTIVE
TRANSFORMATION THROUGH A BUSINESS LENS	Evaluate technology through business outcomes—operational performance, cost, scalability, resilience, and long-term risk.	EXECUTIVE PERSPECTIVE
